

# HS-10

## HOLOGRAPHIC SIGHT

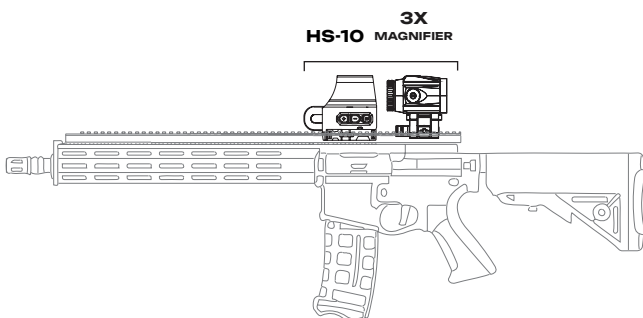

### GENERAL FEATURES

HS-10 is an optical sight featuring combat-proven laser hologram technology. It is compatible with night vision systems and magnifiers, making it effective for both day and night operations and an ideal solution for short- and medium-range engagements.

Its holographic reticle allows for two-eye-open shooting, enhancing situational awareness and enabling rapid target acquisition. Unlike red dot sights, the reticle is visible only to the shooter, providing a tactical advantage in covert operations. With unlimited eye relief and the ability to remain operational even if the lens is damaged or partially obstructed, the HS-10 delivers reliable performance in the most demanding field conditions thanks to its compact and rugged design.

### SPEC SUMMARY

|                         |                |
|-------------------------|----------------|
| Usage                   | Standalone     |
| Field of View           | 17°            |
| Eye Relief              | 70mm           |
| Display Size            | 30×23mm        |
| Battery Type            | 1x CR123       |
| Add-On Optional         | 3X Magnifier   |
| Environmental Standards | MIL-STD 810G-H |

3X  
HS-10 MAGNIFIER

OPERATING TIME  
≥250h

WEIGHT  
<230g

DIMENSIONS (mm)  
78 x 57 x 67
